

COMPLAINT

SECONDARY COMPLAINT

Wrong gear starts

- Case wear at the governor hub seal area

CAUSE

OEM steel governor sealing rings wear the aluminum bore.

CORRECTION

This governor bore sleeve restores hydraulic integrity to the case.

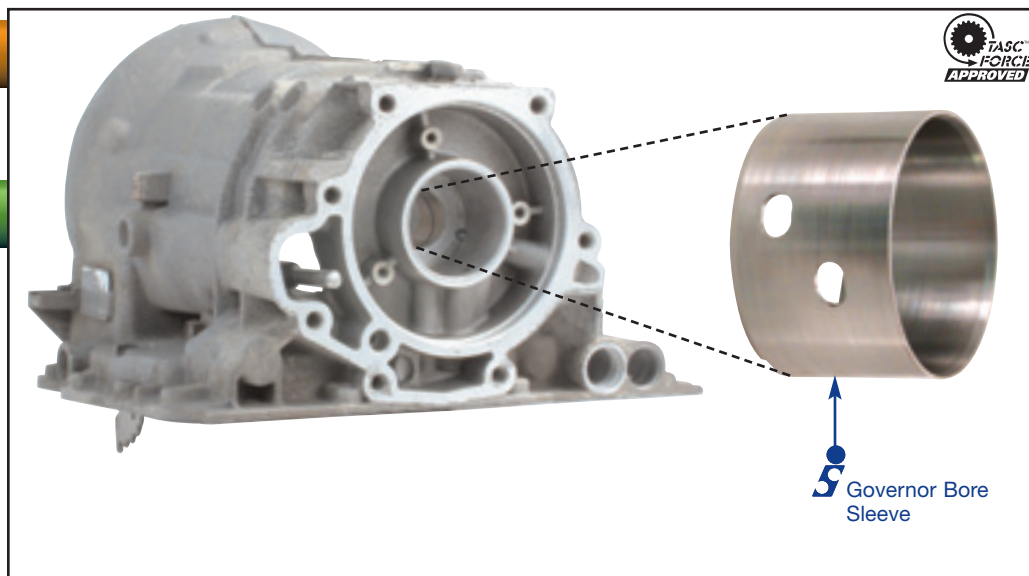

Governor Bore Sleeve

54251-02

1 Governor Bore Sleeve

Note: Requires advanced machining.

Sonnax Part Summary

Vehicles with GM 180 (3L30) transmissions frequently have excessive wear at the governor hub seal area. These units use steel seal rings against an aluminum bore. Because these components are often found in high-mileage vehicles, excessive wear in the sealing ring area leads to fluid leakage and can destroy the case. Sonnax now offers this wear-resistant governor bore sleeve **54251-02**.

Features & Benefits

- Sleeve is made from hardened and ground steel and prevents excessive wear.
- Sleeve salvages worn cases and restores hydraulic integrity.
