

COMPLAINT

Oil leaks due to cracked case

CAUSE

Tapered threads of OE fittings crack case when overtightened.

CORRECTION

The Sonnax adapter allows the case to be salvaged without removal.

Cooler Line Adapter Kit

22000-01K

Start-up Kit

5 Cooler Line Adapters

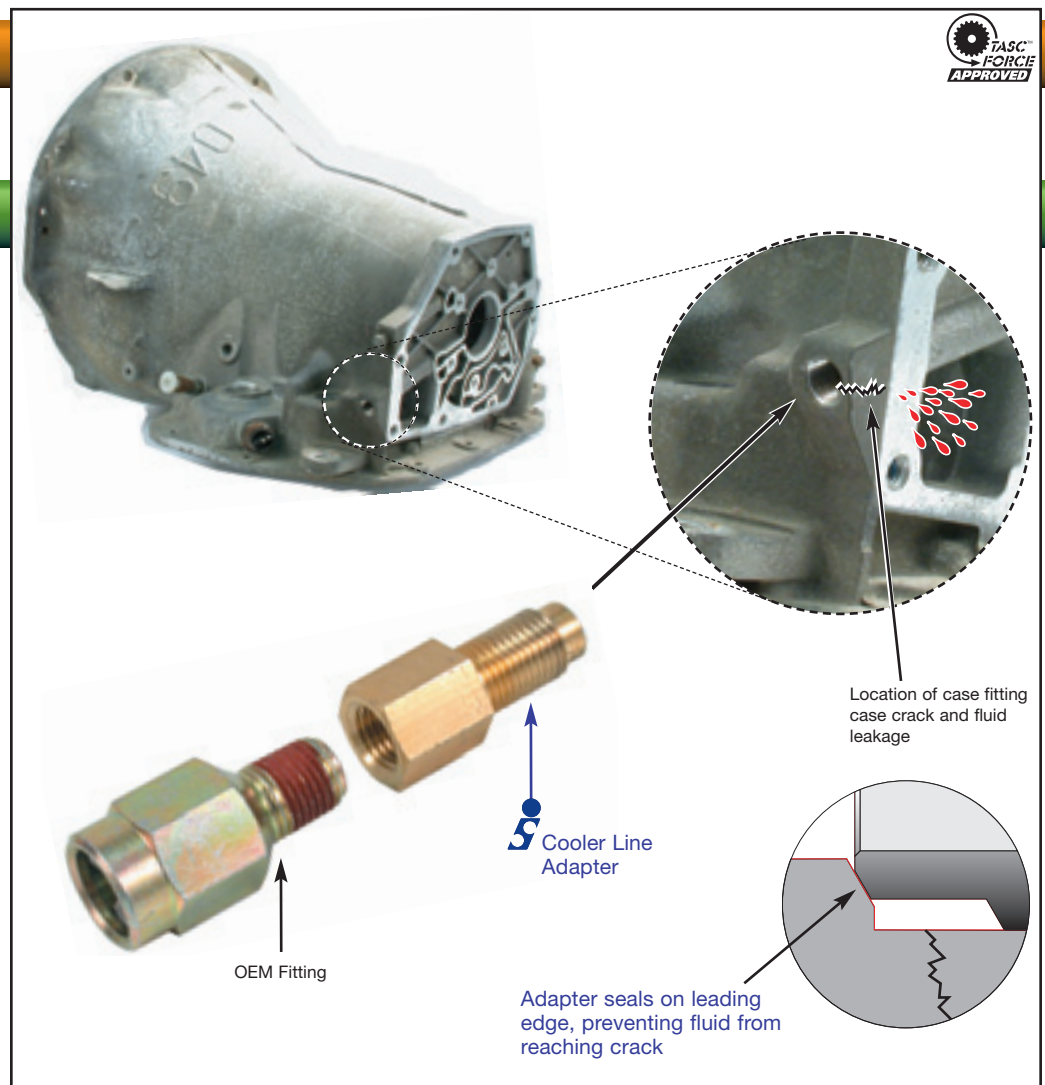

1 Tap

Note: For models with 1/4" pipe fittings only

22000-01

Replacement

1 Cooler Line Adapter

Sonnax Part Summary

A common complaint in late-model Chrysler rear-wheel-drive units is a cracked and/or leaking case caused by installing the cooler lines. The tapered threads and the lack of a stop on the OEM cooler line fitting can load the case and create a fracture, resulting in leakage that may require replacing the case. The Sonnax adapter seals on the leading edge, preventing fluid from reaching the fitting threads and crack. The fitting has straight, not tapered threads to prevent the crack from spreading.

Features & Benefits

- Allows case salvage without transmission removal.
- Includes special tap for case threads.

Save

Up to \$1,000 after a rebuild and case cracks
