

COMPLAINT

Difficulty setting endplay

CAUSE

Commonly used sizes of the OE selective 3-tanged washer are not readily available.

CORRECTION

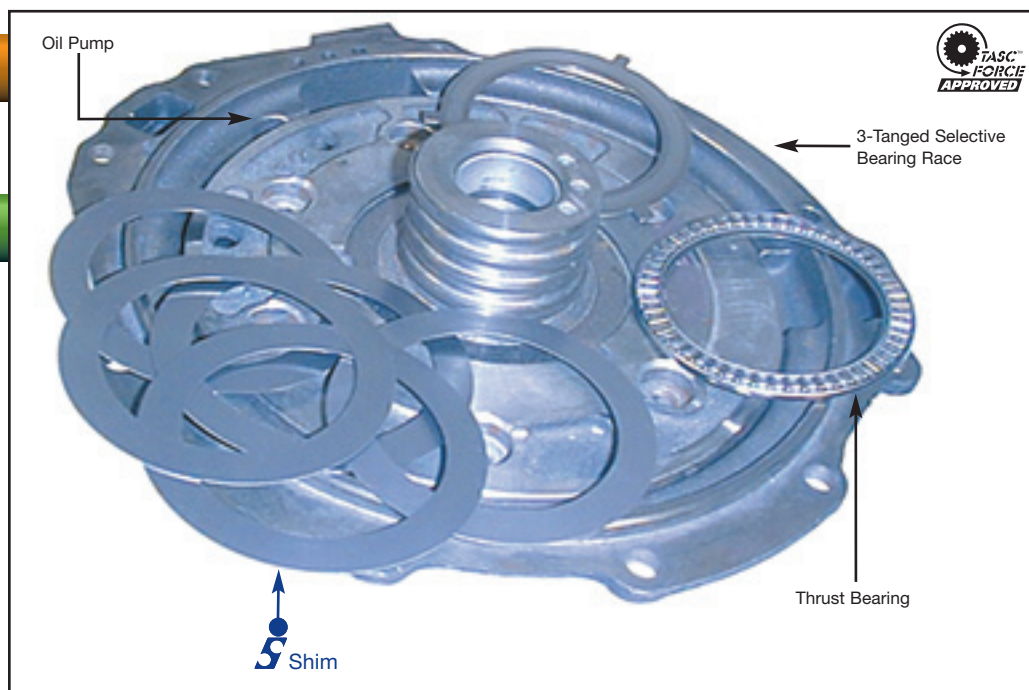

This shim kit contains 5 shims that are .015" thick to help set endplay and eliminate the need to carry quantities of all bearing race size variations.

Front Support Pump Shim

71400-15

5 Shims

.015" thick

Sonnax Part Summary

It is difficult to accurately set the total transmission endplay between the oil pump and the intermediate brake drum on the 4EAT/G4A-EL. When setting the endplay, rebuilders may use up the popular 3-tanged selective thrust washer (bearing race) sizes. It is costly to carry quantities of all 6 selective sizes. The Sonnax shim kit **71400-15** contains 5 shims that are .015" thick. These may be used in conjunction with OE selective bearing races to set the correct endplay and eliminate the need to carry quantities of all bearing race size variations.
