### Sonnax Part Summary

When Chrysler changed the design of its digital neutral safety switch, the case hole was made larger. These late-model cases could not be used for applications requiring the early style neutral safety switch. The Sonnax adapter kit **22179-06K** screws into a late-model case and when used with an earlier style valve body manual lever, allows these cases to be used in earlier model vehicles.

### Features & Benefits

- Allows late-style cases to be installed into earlier units.

**Save \$400** in case replacement costs

**Note:** The three-wire neutral safety switch will NOT work with a late-style manual lever on the valve body. If you are using a late-style case AND late valve body, you MUST change the manual lever on valve body to an early-style lever for the switch to function.
