

## TCC Control Sleeve Assembly

### 36424-08K

1 TCC Control Sleeve Assembly

### Converting TCC from PWM to On-Off.

Ford Motor Co. does not suggest the removal of the multi-plate piston from diesel applications. Due to the lack of replacement parts, many multi-plate PWM converters are being rebuilt with the use of single pistons. Use of the Sonnax sleeve pictured does not convert hydraulics to On-Off for use with single piston conversion. The PWM control is a function of the computer and TCC/PWM solenoid.

### Instructions:

1. Remove and discard the OEM TCC control sleeve assembly. Save the TCC control valve, spring and clip.
2. Reassemble the valve train with the Sonnax TCC control sleeve assembly **36424-08K**.
