

4-Tab PTFE Thrust Washer

77401-01

OEM Thickness

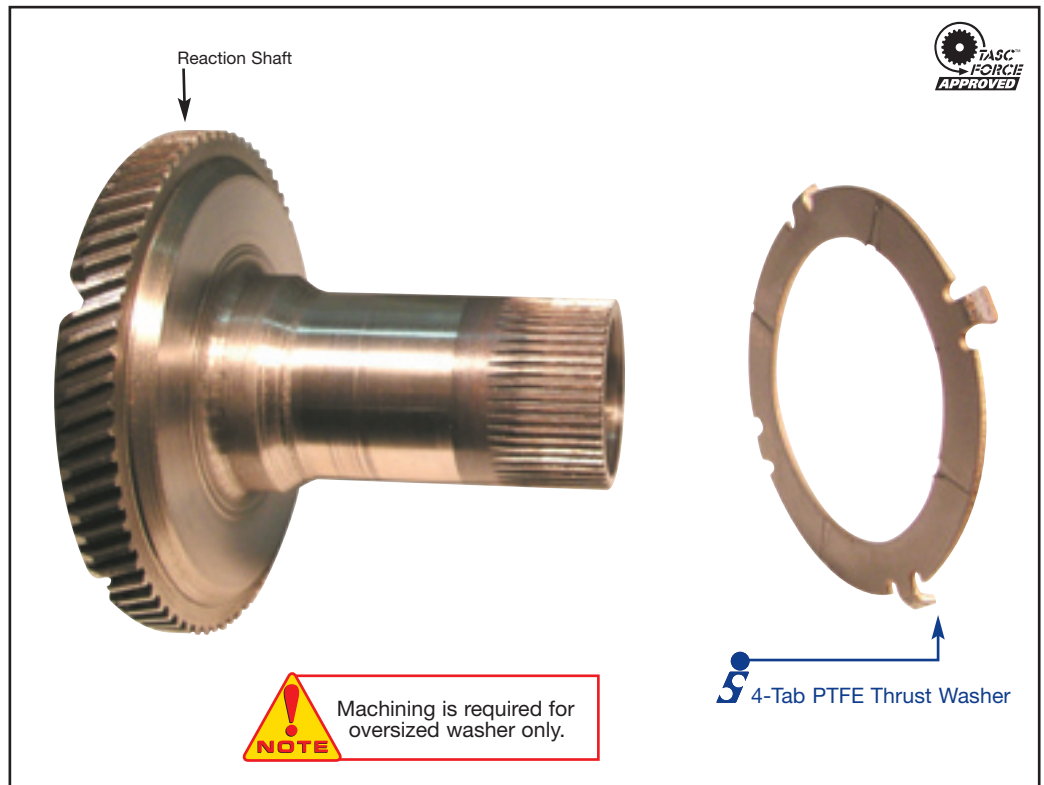

77401-02

Oversized

Each includes the following

1 PTFE Thrust Washer

Note: These washers cannot be used on late units with thrust bearing-style shell.

INSTALLATION:

77401-01 is a drop-in replacement for the OEM washer (no machining required).

77401-02 is a .012" thicker than the OEM washer and is intended for use with reaction shafts that have been salvaged by machining the thrust surface.

Note: When installing 77401-02, the reaction carrier shaft must be re-ground to the specified surface finish and height.

Thrust Surface: Remove .012" material from this surface. For optimal service life, grind to 30 micro-inch, then polish in opposite direction to 8 to 12 micro-inch.
