

Chrysler A6I8, 47RH/RE, 48RE One piece Input Shaft: Appearance Change 22121B-01

Sonnax has changed our process for the final cleaning and rust prevention on our popular **22121B-01** Chrysler A6I8, 47RH/RE, 48RE one piece input shaft. This new method slightly alters the coloration and appearance of the shaft. Previous Sonnax shafts had the familiar heat treatment bluish color. Our new cleaning process removes that 'heat treated' bluing. Please note that these shafts are still made from the same one piece 300m (USA) steel forgings we have always used, and they are still heat treated and shot peened to our exact same specifications. The FIT, FORM and FUNCTION of these shafts have not changed, but you will notice that shafts from newer production are now uniformly 'steel gray' in color. Whether or not the shaft shows obvious signs of heat treatment, if it comes from Sonnax you can be sure that it has been manufactured to the standards you have always counted upon.
