

Slippery Stick™

Part No.
O-LUBE

Application

For all transmissions.

Sonnax Slippery Stick is a specially formulated lubricant to ease in the installation of boost sleeves with O-rings. This lubricant has adhesive properties to approximately 80°F (27°C), allowing O-rings, rubber lip seals and Teflon® rings to be stuck in place to help prevent cutting or rolling.

Slippery Stick also offers a convenient way to position seals during assembly. The lubricant will melt and dissipate safely into ATF at approximately 145°F (63°C). Use an amount sufficient to hold the seal, but yet allow low-temperature fluid to lift the seal.

Features & Benefits

- Prevents cutting and rolling of rings and seals.
- Holds seals in place during assembly.
- Dissipates safely into ATF at operating temperatures.
