Solenoid Regulator Valve Wet Air Test Information

Converter Regulator Valve Wet Air Test Information

For AXODE, AX4S and AX4N 2- & 4-spoiled versions:

Place a small amount of oil into the balance port (when you test on AX4Ns you must plug the opposite side) and follow with low air pressure. There should be little/no leakage past the spool and out the inboard exhaust port or regulated line port.

For AXODE, AX4S, & 4-spoiled AX4Ns ONLY
(can't do on 2-spoiled AX4Ns):

Place a small amount of oil into the outboard exhaust port and plug the bore opening securely with thumb. Follow with low air pressure. There should be little/no leakage past the spool and out the outboard regulated line port.
