

Manual Valve

22771-09

1 Manual Valve

Note: U.S. Patent No. 6,689,007

Note: Fits All 42-46-47RH/RE units. Manual valve can be used on 727/904 units if the original PR valve design matches the **22771A-02K** shown.

Installation Instructions

Remove the OEM manual valve and replace it with the new Sonnax manual valve **22771-09**. No further modifications are necessary.

Note: If a line-to-lube hole has been drilled in the PR valve circuit, it should be plugged to reduce converter drainback.

Note: To prevent converter slippage, restricted cooler flow and possible hydraulic noise, remove the cooler line drain-back valve.
