------	------------------	-----------------	--------------	--------------------------	----------

Sonnax is the leading supplier of components to torque converter rebuilders worldwide. We offer a full line of high-quality torque converter parts for domestic, foreign, performance and industrial torque converters along with outstanding customer support. Many Sonnax torque converter components have been designed for improved performance and greater durability to meet the increasing torque demands of today's marketplace. We supply front covers made from billet steel, heat-treated impeller hubs, all-steel turbine hubs with heat-treated splines, high-quality Timken bearings, along with many other items. We work closely with our worldwide customer base to ensure availability of quality product for early- and late-model units, bringing on new items as units come into the aftermarket. Our sales staff and engineers make customer support a priority, addressing customer questions and concerns as quickly and professionally as possible, and providing technical information to rebuilders.
