- Molded from high-performance phenolic resin
- Improved solid construction

Part No.

GM-WP14-OE

Plastic Thrust Spacer

Sold in prepackaged quantities of 10 units

Please refer to our

2003 TORQUE CONVERTER PARTS CATALOG

GM-WP14-OE is:

Another option for Item Number 12 of Reference Figure 1.07 on Page 30 and Item Number 12 of Reference Figure 3.09 on Page 122.

Sonnax now offers **GM-WP14-OE**, molded from a high-performance phenolic resin. A significant upgrade over the OEM thrust spacer, **GM-WP14-OE** has been designed specifically for the AT540 and GM400 converters. A thicker ribbed flange makes it easier to stake in place, eliminating failures caused by parts spinning in the stator. The solid, non-cored design helps prevent fracturing, blistering or cracking.
