

G4A-HL, 4EAT, G4A-EL, F4A-EL & F4EAT Pump Drive Tool

71151-K

1 Pump Drive Tool

Installation Instructions

Remove the protective cover from the test tool and install into a 1/2" drill. The tool installs just like a converter: the bushing rides on the stator support shaft, the O.D. seals the radial lip seal, and the splined insert drives the pump shaft. Use the drill to rotate the pump shaft and charge the unit. Cooler fluid must be added, lines must be plugged and side oil pan removed for possible leakage identification.
