

COMPLAINT

SECONDARY COMPLAINTS

Slip on 3-4 or Loss of 4th

- Sleeve spins loose on aluminum cover

CAUSE

The OEM sleeve rotates on the case due to insufficient press fit. This restricts oil flow to the K-2 Clutch (which is applied in 4th, 5th & 6th gear).

CORRECTION

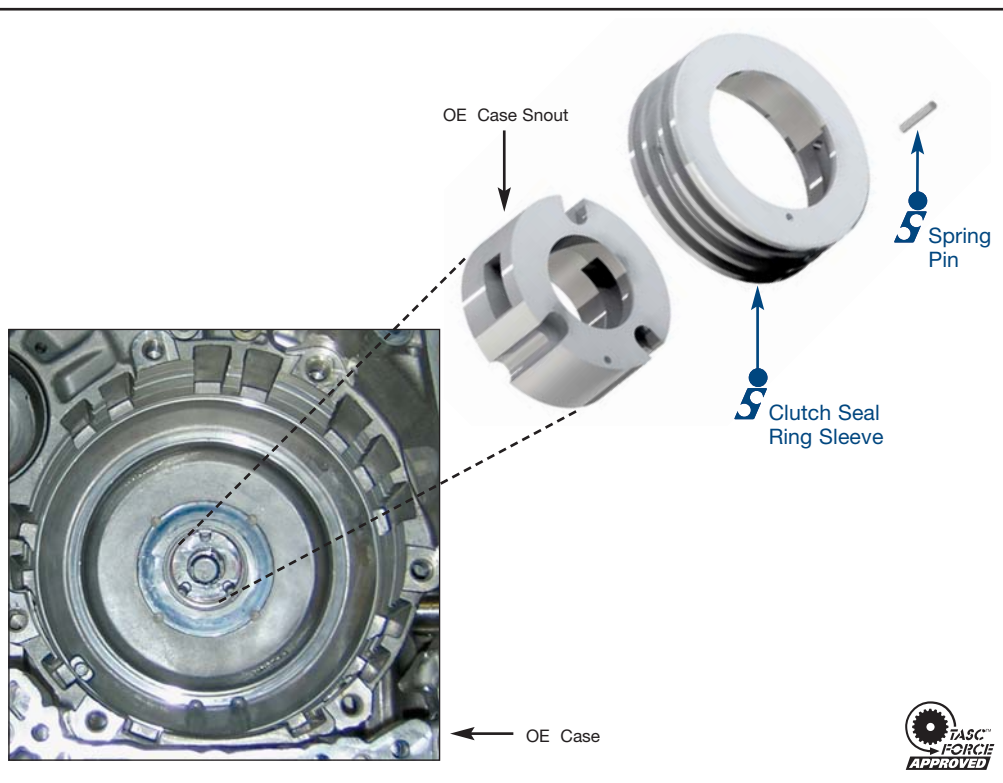

The Sonnax sleeve was designed for use with an anti-rotation pin and has an increased press fit, which results in greater retention.
