

COMPLAINT

SECONDARY COMPLAINT

Excessive rear unit endplay

- Drivetrain noise

CAUSE

Normal wear of the shim.

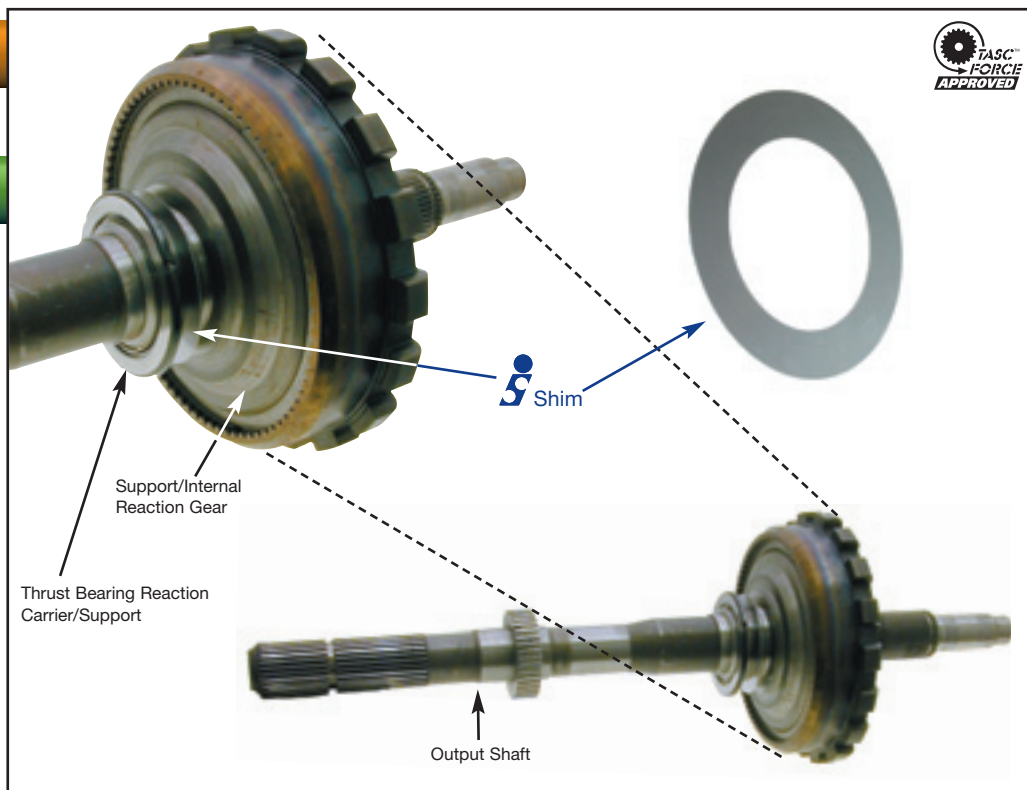

CORRECTION

This selective rear unit endplay shim installs between the rear reaction carrier support and the case bearing and allows for adjustment to the total and top unit endplay.

Rear Unit Endplay Shim

77406-10

10 Rear Unit Endplay Shims .0107"

Sonnax Part Summary

Sonnax has designed shim 77406-10 for use in 350, 350C, 700-R4 and 4L60-E applications. This selective shim installs between the rear reaction carrier support and the case bearing. This shim allows for adjustment to the total and top unit endplay. The total unit endplay (tested by dial indicator on the input shaft) should not exceed .036"(.005" to .036").
