- 1.39" I.D.
- 2.56" O.D.
- 0.16" thick

Part No.

CH-WF-3

Fibre Thrust Washer

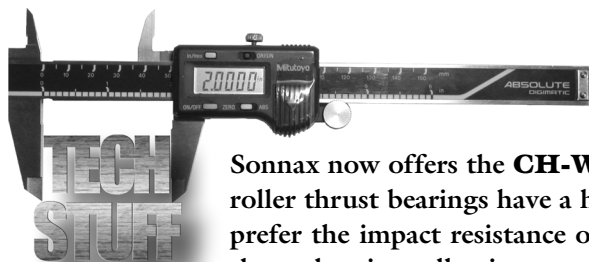

Sold in prepackaged quantities of (25) units

Please refer to our

2003 TORQUE CONVERTER PARTS CATALOG

CH-WF-3 is:

Item Number 24 of Reference Figure 3.06 on page 114 and Item Number 24 of Reference Figure 3.07 on page 118.

Sonnax now offers the **CH-WF-3**, a fibre washer for replacing OEM thrust bearings. The OEM roller thrust bearings have a high failure rate when subjected to impact loading. Many rebuilders prefer the impact resistance of the fibre washer. The **CH-WF-3** is .020" thicker than the OEM thrust bearing, allowing resurfacing of the front cover if required. Extra shims are not required when using the **CH-WF-3**.

Note: Install thrust washer with oil grooves facing front cover when using OEM turbine hub. Install thrust washer with oil grooves facing turbine when using Sonnax turbine hubs.
