

**Features & Benefits:**

- Made from ultra-high-strength chrome/nickel steel to withstand high tooth loading
- Fits model years '83 and up
- Improved oil flow
- Top quality gear for low aftermarket price

**Part No.****84945-01K***1 Input Sun Gear***PART SUMMARY**

When rebuilding 4T60 and 4T60-E transmissions you will often find the input sun gear has been damaged. The helical gear teeth are often pitted and spalled under normal operation due to heavy loading, poor lubrication or incorrect hardness depth.

The Sonnax input sun gear **84945-01K** fits the 4T60 ('83-'93) assemblies with either a single or double track roller bearing as well as the 4T60-E ('93-up), which does not use a bearing in the assembly at all.
